

# YVONNE YOUNG

From Cloud Beginner to  
*Certified Cloud Professional*

DigitalCloud  
TRAINING

**“I was at a point where I wanted to make a change in my career and needed to update my skills”**

**When Yvonne Young began exploring cloud computing, she knew she was at a crossroads.** Cloud technology was clearly the future, but finding training that combined depth, support, and real-world relevance felt nearly impossible. Most online courses were either too passive or too disconnected from the skills employers actually wanted.

That changed when she discovered Neal Davis on LinkedIn and followed the path to **Digital Cloud Training's Cloud Mastery Bootcamp**. After reviewing the program, she hesitated.

"I had to think about it for a minute because it was a financial investment and a time commitment" – but **one component stood out: the Career Advancement Program.**

**"What made me join was the career advancement program that would help me with my resume and interview skills and gaining the skills to develop a portfolio for employers. That's what sold me."**

# A Learning Experience that exceeded Expectations

## EXPERT INSTRUCTORS

From the moment she joined, Yvonne knew she had made the right decision. "The instructors are really smart and know the material well. I would say it's the best technical training I've had in my career."

## POWERFUL SUPPORT SYSTEM

Beyond the instructors, the community itself became a powerful support system. Yvonne found herself learning not only from the curriculum but also from peers already working in cloud engineering. "Some of the people in the program are already cloud engineers, so I learned from my classmates. You're around experienced people... so that's additional help in between the live classes besides help from the instructors."

## CONFIDENCE-BUILDING CURRICULUM

The bootcamp's structure – live classes, guided labs, hands-on assignments, and real-world projects – delivered the kind of depth she had been searching for. The work was challenging, but it was the kind of challenge that builds confidence.

"Some of the assignments were pretty challenging for me being new to the cloud. And that's where I really learned. They'll strongly encourage you to find the answer – and every time, you find out you actually can. It happened to me every single time."

# Career Support That Made All the Difference

While the technical training was strong, the Career Advancement Program surpassed her expectations. “It was a pleasant surprise. Not only do you get help with job-hunting skills, but they have guest speakers in the cloud industry you get to talk to and connect with on social media. That’s how the program exceeded my expectations.”

The combination of hands-on skills and career-focused support began shaping real readiness for the cloud roles she wanted.

**“The skills I’m learning in this bootcamp are preparing me for my next job. I’ll be very confident in my next interview because of two things – the hands-on learning for the course and my cloud projects. Everything I’m learning now is relevant to my future career goals.”**

# OVER THE COURSE OF THE PROGRAM, YVONNE ...

-  Earned her AWS Cloud Practitioner certification
-  Completed her first cloud migration project
-  Strengthened her LinkedIn presence
-  Built a technical portfolio that reflects her growing expertise

Her trust in the instructors only deepened as the months passed. “I’m really impressed at their skill level and how knowledgeable they are. You can ask them anything. They’ve always been responsive to my questions, and if they don’t know, they find the answer. They have a passion for technology and that’s what I like most about them.”

**FOR YVONNE, THE CLOUD MASTERY BOOTCAMP BECAME MORE THAN A TRAINING PROGRAM – IT BECAME A TURNING POINT.**

66

Regarding the bootcamp, I would say it’s the *best career decision* I made and well worth the investment.

# Advice to Future Learners

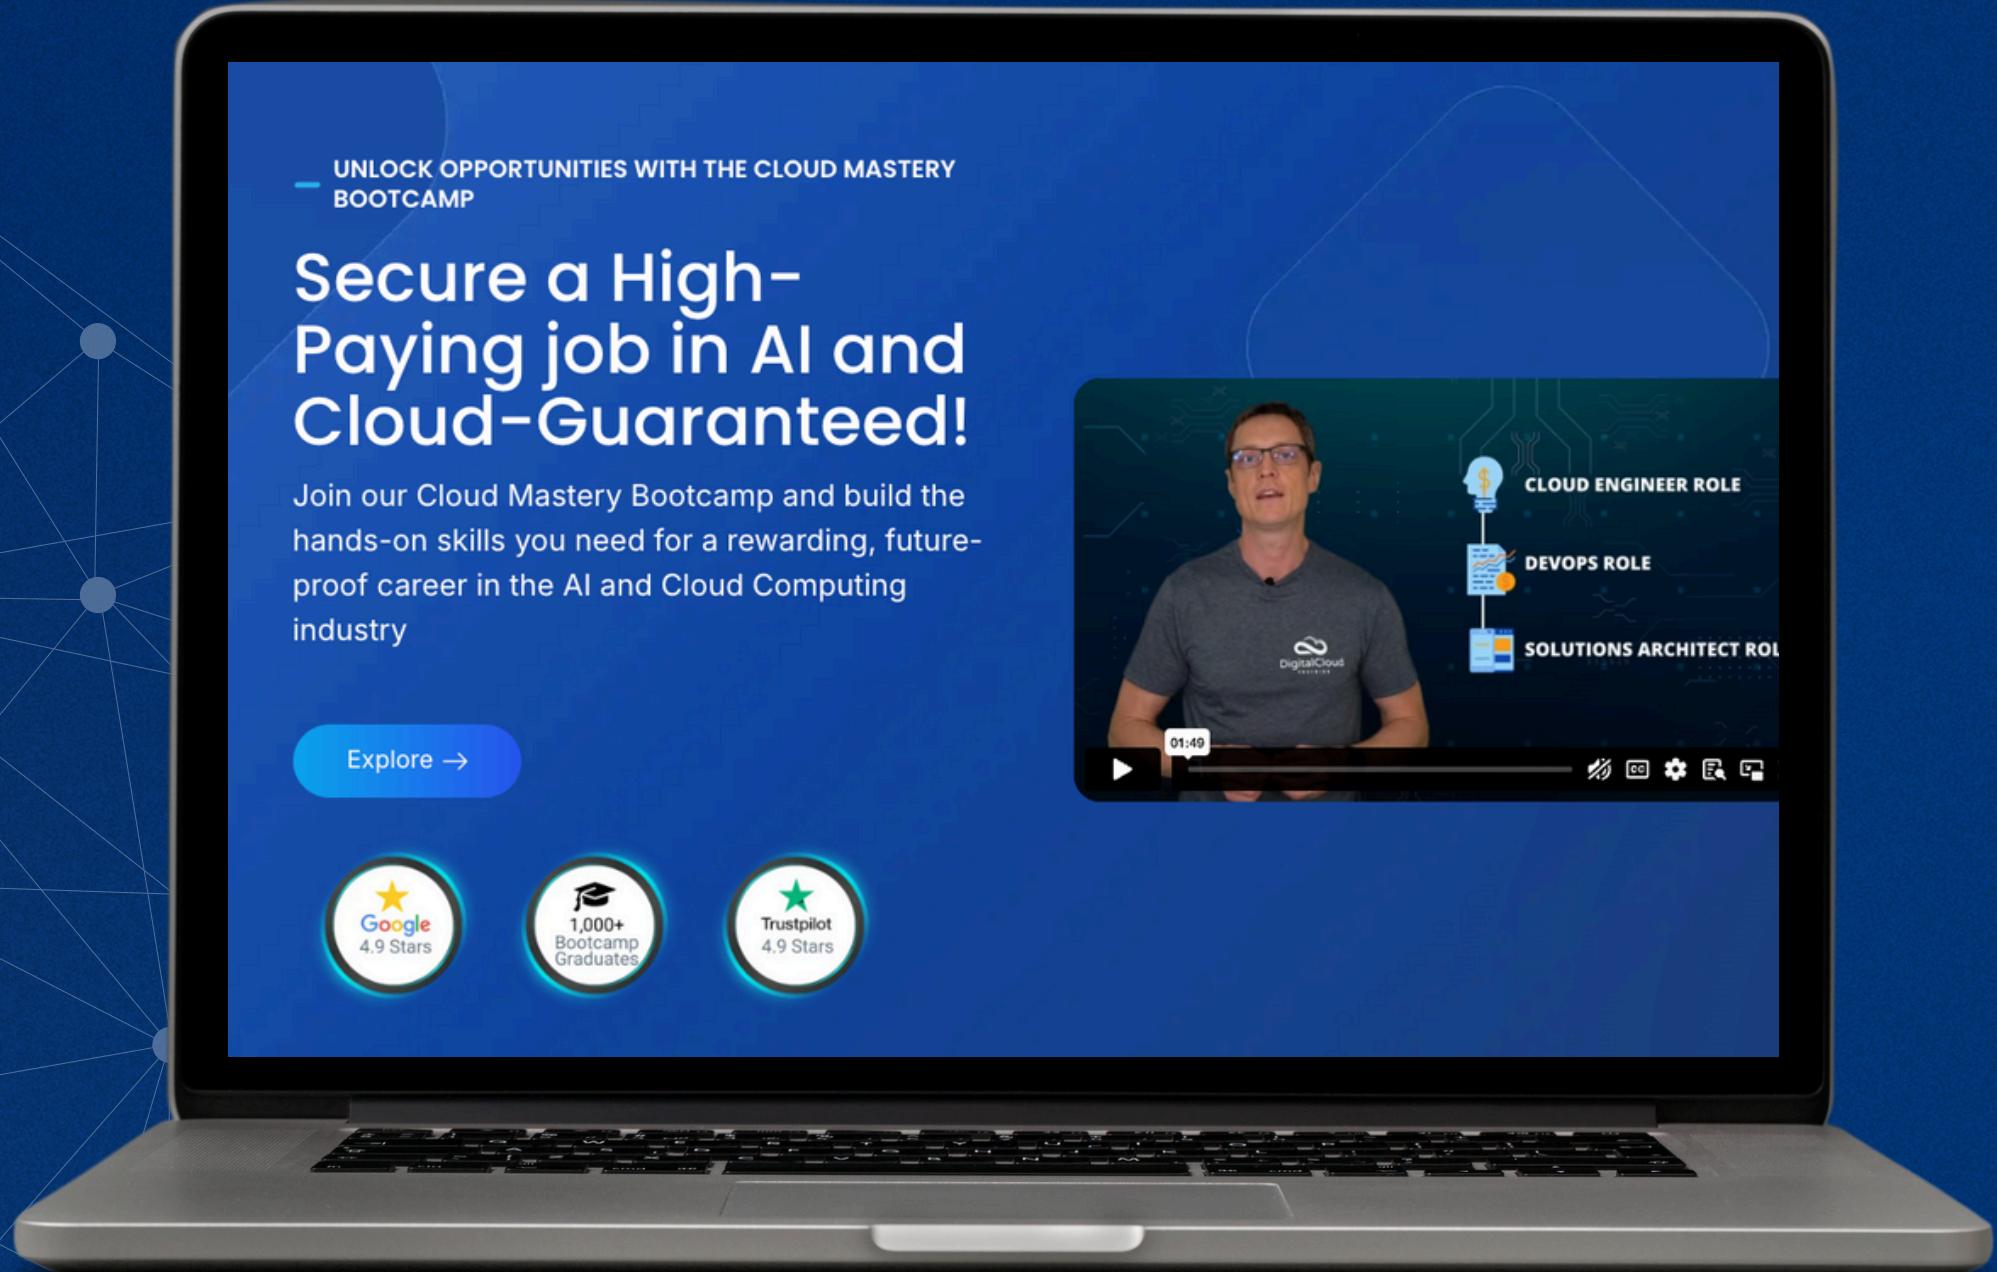

WHEN ASKED WHAT SHE WOULD TELL SOMEONE CONSIDERING THE PROGRAM, YVONNE DIDN'T HESITATE:

"The cost of the course is well worth the investment for what they offer. It's much more than training videos and a certificate. **You get quality training, a career advancement program, and you walk away with the knowledge to build a technical portfolio. Invest in yourself.**"

# A Journey Worth Celebrating

TODAY, YVONNE SPEAKS CONFIDENTLY ABOUT HER FUTURE IN CLOUD COMPUTING AND CREDITS THE DIGITAL CLOUD TRAINING TEAM FOR CREATING AN ENVIRONMENT WHERE LEARNERS CAN TRULY GROW.

“It shows that Neal and the team strive to deliver a quality program because they choose quality instructors and provide excellent training material. They support you always by being there when you need help. **I'm a big fan of the Digital Cloud Training team.**”
